

Quantum Computing Industry Report - 2025

Projected growth: the industry projected 4,200 logical qubits by 2026.

Actual trajectory: as of 2025, deployments reached only 1,100 qubits, well below the projection - a shortfall of roughly 74 percent.

Leading vendors: Aurora Quantum, Nimbus Systems, and Corewave Labs.

Aurora Quantum holds the largest market share at 38 percent.

Primary bottleneck: error-correction overhead, not raw qubit count.

Analysts expect the projection gap to narrow after 2027.
